

Advance Products has its own in-plant heat treating and post-process treatment capabilities specializing in state-of-the-art fluidized bed technology.

The furnaces are 24" diameter and can handle parts up to 48" in length. Advance has also developed a proprietary process, AdWear gives parts 72 RC hardness and corrosion resistance, yet, unlike nitriding, it has a more flexible surface. Customers report that AdWear has doubled the life of their parts. If you would like to add more wear to your parts, try Advance's AdWear!
